July 15, 2025

Introduction

This document provides a comprehensive guide to Mockin, a job interview simulator designed for UX/UI and product designers. Launched on Product Hunt on July 13, 2025, as its second iteration, Mockin aims to help designers prepare for interviews with professional real-time AI interactions, personalized feedback, and resume matching. This documentation focuses on the cost of using Mockin and detailed instructions on how to use it effectively.

1 Overview of Mockin

Mockin is a tool built by designers for designers, addressing the challenges faced by job seekers and hiring managers. Over 1,300 designers have used it to prepare for interviews, offering features like real-time AI interviews and a question bank of 200+ questions based on the STAR method (Situation, Task, Action, Result). It supports practice in 7 languages and caters to professional levels: junior, middle, senior, and lead.

2 Cost of Mockin

Specific pricing for Mockin is not publicly detailed in available sources as of July 15, 2025. However, the following insights can be inferred:

- **Free Access:** The fact that over 1,300 designers have utilized Mockin suggests a free tier or trial period is available, likely to encourage initial adoption and practice.
- **Potential Paid Features:** Given the context of enhanced tools in similar Product Hunt products (e.g., advanced analytics or priority support), Mockin may offer premium features at an additional cost. This could follow a freemium model where basic features are free, and advanced functionalities (e.g., extended feedback or additional question banks) require payment. No exact price is confirmed.

- **Recommendation:** For the most current and accurate pricing details, users should visit the official Mockin platform or contact the Mockin team directly, as costs may vary based on usage levels or subscription plans.

Note that pricing could include options for individual designers or bulk licenses for teams, but this remains speculative without official confirmation.
